

Install Checklist

To ensure smooth, safe, and successful installation, review this checklist and prepare your space before our team arrives.

Clear Access to the Work Area

BAGM materials are dense and heavy, providing a clear, direct path from our install vehicles to the work area is crucial. The safety of our technicians, your family, pets, and other trades is our top priority.

You can review entry points with your **template technician** or **project manager** in advance.

- ☐ Move furniture, tools, art, or décor out of the entry path.
- ☐ Clear driveways and access points; remove personal and trade vehicles.
- ☐ Whenever possible, BAGM will enter through the **garage or front door** – please allow our trucks to park close to these areas.
- ☐ Avoid driveway construction immediately before or during installation.
- ☐ Ensure other trades are not working in access areas while materials are being carried in.
- ☐ For **non-ground-level installations**, discuss access, seams, or special equipment needs with your project manager in advance.

Prepare the Work Area

To protect everyone's safety and ensure efficient installation:

- ☐ Keep **pets and children** away from all work zones.
- ☐ Have **other trades** clear the area until our work is complete.
- ☐ Clear off all **support surfaces** (cabinets, existing counters, etc.).
- ☐ Completely empty **sink cabinet, cooktop, and corner cabinets**.
 - Other cabinets can remain full, but expect minimal dust or debris.
- ☐ Remove **top drawers** for access.
- ☐ Disconnect all **plumbing, electrical, and gas** connections prior to installation.
- ☐ Remove any cabinetry sitting on existing countertops.
- ☐ Discuss appliance removal with your **template technician or project manager**– some items may need to be taken out temporarily.

Have All Cut-Out Items On Site

Please ensure all cut-out items are on-site and ready for review, including:

- ☐ **Sinks, faucets, cooktops, grommets, pop-up outlets, kegerator taps**, and similar fixtures.
- ☐ Our technicians will **mount undermount sinks** and test-fit most other cut-out items to ensure proper fit.

After Installation

- ☐ Allow **24 hours** before using the installed area or having other trades work nearby. This ensures all adhesives and caulks have been cured properly and prevents dust from affecting the finish.
- ☐ Our team will perform a **broom-swept clean-up**, but some additional cleaning may be needed.
- ☐ Minor wall scuffs may occur during installation. BAGM technicians take care to protect cabinetry and will prioritize avoiding cabinet damage. Please share any special concerns with your project manager or template technician.
- ☐ Cover your countertops if other trades are working afterward – our surfaces are durable but not designed to serve as workbenches.
- ☐ A **project manager** will review your installation the following morning using technician notes and photos. You'll be contacted by **noon the next day** if any issues are identified.
- ☐ If you have any concerns, please email your **project manager** with a brief description and photos. This helps us review your project quickly and provide a timely solution.
